on the inside

MAXIMA
ADVANCED SOLUTIONS

Elektra

Elektra is the result of careful research undertaken by people passionate about cleaning and innovation, and represents the last frontier of the latest-generation multifunction devices.

It performs the functions of 5 appliances:

**it vacuums,
washes,
dries,
sanitises
and irons.**

It is a special, powerful and ecological machine, it doesn't need any filters or bags that have to be changed every so often, it uses the natural properties of water to ensure maximum hygiene and cleaning. As it is small, it can be manoeuvred easily and can be kept anywhere, Elektra is the solution you are looking for.

small on the
outside,
professional
on the inside

The **boiler** refills automatically

Elektra
MADE IN ITALY

Elektra's 160°C steam guarantees deep hygiene thanks to its efficient boiler.

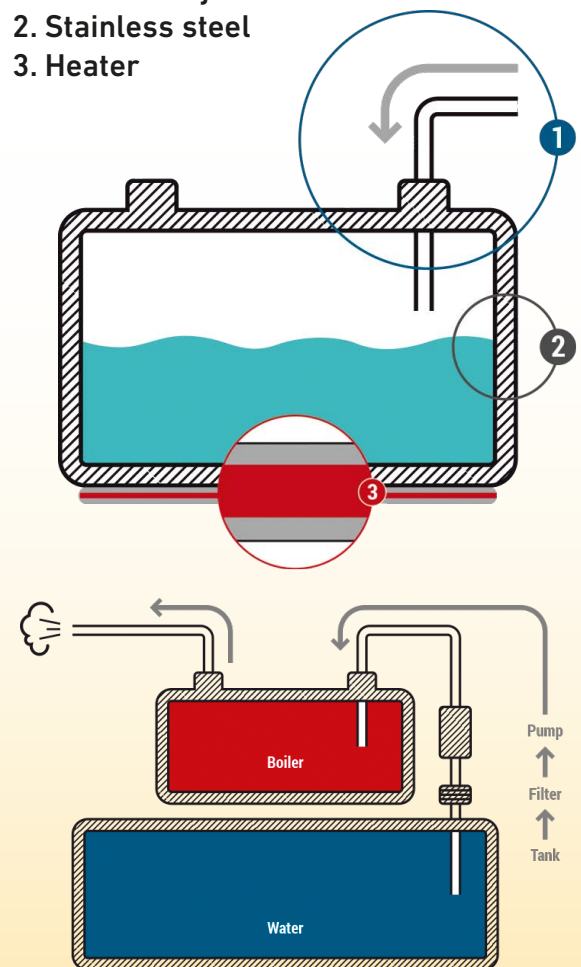

The boiler is one of the main components of the machine, steam is created inside it. Limescale is the boiler's main enemy, Maxima uses technology designed to help reduce the risk of clogging and malfunction.

Automatic refilling

A high-pressure pump injects water directly into the boiler while always keeping the level constant when using steam. You can refill the tank even when the machine is switched on without losing time.

STEAM GENERATION

1. Descaler injector
2. Stainless steel
3. Heater

Elektra's 160°C steam is a guarantee of deep hygiene

Air cleaning

Elektra
MADE IN ITALY

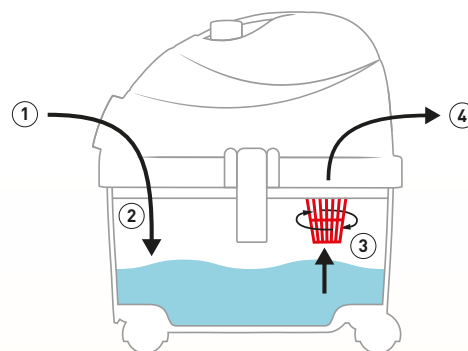

Elektra's special motor performs two functions: deeply sucking the dirt and filtering the outgoing air.

The exclusive molecular separator mechanically intercepts the smallest dirt particles and guarantees constant air filtration. Thanks to it, the engine will not suffer the loss of suction due to dirty filters that need to be replaced.

The aspiration of Elektra is always at maximum efficiency.

Sucking up dirt is not enough, it must definitely be trapped

AIR CLEANING CYCLE

- 1 Suction**
Unhealthy air and dust are sucked up and conveyed inside the machine.
- 2 First filtering**
Unhealthy air is subjected to a first filtering using water.
- 3 Output of clean air**
A second filtering operation is then carried out by the exclusive "molecular separator" that manages to intercept and reject even the smallest particles.
- 4 Output of clean air**
These two natural filters expel healthy, clean and perfumed air.

standard accessories

Steam lance adapter

Multifunction brush

Extensions

Handle with hose

Wiper

Tank filling bottle

150-mm opening

Kit sanitation maxi

Vaporizing turbo brush

Iron

Turbovapor

High efficiency turbo brush

Extendable hose

Vaporiser

Natural essential oils

Acqua Clean

Transparent opening

optional accessories

Technical data

Suction: **2400 MM**

Motor power: **1200 WATT**

Dimensions: **37 × 30 × 40 CM**

Steam pressure: **4,5 BAR**

Boiler power: **1800 WATT**

Boiler volume: **0,8 L**

Refilling system: **AUTOMATIC**

Steam ready: **3 MIN**

Water tank for steam: **1,5 L**

Water filter capacity: **5,5 L**

Some important features

- > Intuitive control panel with digital display
- > Dual-turbine motor
- > Excellent holding capacity of up to almost 6 litres
- > Biggest water filter in its class
- > Molecular separator
- > 4,5 bar steam with unlimited autonomy
- > Energy saving boiler
- > Powerful suction of solids and liquids
- > Cleans the air
- > Steam cleaning
- > Instant drying
- > Professional ironing
- > Automatic refilling
- > Made in Italy
