Sanitizing Kit

Cleaning and sanitizing has never been easier, the new kit for Maxima steam machines adapts to all needs and saves time and effort.

5M FLEXIBLE STEAM HOSE

The ergonomic handle with 5m of flexible hose is the basis of the kit. The length of the hose has been designed to make all cleaning and sanitizing operations easier by reducing the movement of the machine.

NEBULIZER LANCE WITH TANK

It allows you to vaporize hydrogen peroxide on surfaces and sanitize in a practical way without having to buy additional machinery. The special construction system minimizes the contact of the peroxide with the high temperature of the steam and allows the use of a lower concentration of H2O2.

ALUMINUM STEAM EXTENSIONS

The strength of the aluminum and the practicality of the quick coupling make them indispensable for cleaning floors and for reaching distant surfaces without using the ladder.

STEAM MOP BASE WITH JOINT

Equipped with joint and quick coupling, it allows you to use the special microfiber mops with velcro without the need for pliers or springs for locking.

ULTRA MICROFIBER MOP

Its high absorbent capacity allows you to clean several square meters before being replaced and washed. Specifically designed for use with steam, it also withstands the use of disinfectants and it is also suitable for use in clinics and hospitals.

IDRO-SAN

OPTIONAL

The concentrated solution of hydrogen peroxide without peracetic acid is ideal for use with steam. Tested by us in the laboratory on Escherichia Coli, peroxide has been indicated by the WHO as effective against coronavirus.

available for all Maxima machines
